

**B.Tech DEGREE EXAMINATION, MAY 2024**

Seventh Semester

18ECE320T - SOFTWARE DEFINED NETWORKS

(For the candidates admitted during the academic year 2018-2019 to 2021-2022)

**Note:**

- i. **Part - A** should be answered in OMR sheet within first 40 minutes and OMR sheet should be handed over to hall invigilator at the end of 40<sup>th</sup> minute.
- ii. **Part - B** and **Part - C** should be answered in answer booklet.

**Time: 3 Hours**

**Max. Marks: 100**

**PART - A ( $20 \times 1 = 20$  Marks)**

**Marks BL CO**

### Answer all Questions

- |    |                                                                                                       |   |   |   |
|----|-------------------------------------------------------------------------------------------------------|---|---|---|
| 1. | Pick the phrase that best describes Software Defined Networking (SDN)                                 | 1 | 1 | 1 |
|    | (A) SDN is an architecture that separates the network control and forwarding functions.               |   |   |   |
|    | (B) SDN is a protocol that enables communications between network devices.                            |   |   |   |
|    | (C) SDN is an application that can be used to manage networks.                                        |   |   |   |
|    | (D) SDN is a network device of advanced features.                                                     |   |   |   |
| 2. | What are the 3 layers that make up SDN?                                                               | 1 | 2 | 1 |
|    | (A) 1) The network layer, 2) The physical layer, and 3) The transport layer                           |   |   |   |
|    | (B) 1) The application layer, 2) The control layer, and 3) The physical layer                         |   |   |   |
|    | (C) 1) The application layer, 2) The transport layer, and 3) The network layer                        |   |   |   |
|    | (D) 1) The transport layer, 2) The network layer, and 3) The data link layer                          |   |   |   |
| 3. | What is an open networking?                                                                           | 1 | 2 | 1 |
|    | (A) Networking software that vendors make available to the public to develop                          |   |   |   |
|    | (B) A program to promote networking among developers.                                                 |   |   |   |
|    | (C) An initiative to create more interoperability, automation and flexibility in networking products. |   |   |   |
|    | (D) Same as Software defined networking                                                               |   |   |   |
| 4. | Which Component of SDN framework, the Open Flow is used?                                              | 1 | 1 | 1 |
|    | (A) SDN Controller                                                                                    |   |   |   |
|    | (B) South bound interface                                                                             |   |   |   |
|    | (C) NOS                                                                                               |   |   |   |
|    | (D) North bound interface                                                                             |   |   |   |
| 5. | VXLAN is _____.                                                                                       | 1 | 1 | 2 |
|    | (A) A switching protocol                                                                              |   |   |   |
|    | (B) A Data compression protocol                                                                       |   |   |   |
|    | (C) used to create overlay networks                                                                   |   |   |   |
|    | (D) An encryption standard                                                                            |   |   |   |
| 6. | _____ is a popular SDN controller from Big switch Networks                                            | 1 | 1 | 2 |
|    | (A) POX                                                                                               |   |   |   |
|    | (B) Trema                                                                                             |   |   |   |
|    | (C) Floodlight                                                                                        |   |   |   |
|    | (D) Ryu                                                                                               |   |   |   |
| 7. | A flow table resides on _____.                                                                        | 1 | 1 | 2 |
|    | (A) network device with flow entry alone                                                              |   |   |   |
|    | (B) network device with flow entry and action                                                         |   |   |   |
|    | (C) network device with action alone                                                                  |   |   |   |
|    | (D) Controller with flow entry and action                                                             |   |   |   |

- |                                                                                                               |   |   |   |
|---------------------------------------------------------------------------------------------------------------|---|---|---|
| 8. Openflow Protocol defines communication between                                                            | 1 | 1 | 2 |
| (A) Controller and Switch                                                                                     |   |   |   |
| (B) Controller and Application                                                                                |   |   |   |
| (C) Switch and Application                                                                                    |   |   |   |
| (D) Switches                                                                                                  |   |   |   |
| 9. _____ is an open standard communication protocol for message oriented middleware based on XML.             | 1 | 2 | 3 |
| (A) XMPP                                                                                                      |   |   |   |
| (B) DMI                                                                                                       |   |   |   |
| (C) BGP                                                                                                       |   |   |   |
| (D) IBGP                                                                                                      |   |   |   |
| 10. In Juniper networks, the service chaining is referred as _____.                                           | 1 | 2 | 3 |
| (A) vPath                                                                                                     |   |   |   |
| (B) Tunneling                                                                                                 |   |   |   |
| (C) The service Engineered path                                                                               |   |   |   |
| (D) The sequential path                                                                                       |   |   |   |
| 11. The abbreviation "COTS" stands for                                                                        | 1 | 1 | 3 |
| (A) custom option to service                                                                                  |   |   |   |
| (B) commodity-oriented technical solution                                                                     |   |   |   |
| (C) commercially offered technical solution                                                                   |   |   |   |
| (D) commercial off the shelf                                                                                  |   |   |   |
| 12. _____ provides discovery, registration, and delivery services for virtual disk images                     | 1 | 2 | 3 |
| (A) Nova                                                                                                      |   |   |   |
| (B) Glance                                                                                                    |   |   |   |
| (C) Swift                                                                                                     |   |   |   |
| (D) Cinder                                                                                                    |   |   |   |
| 13. VXLAN segments are identified by a _____ -bit segment ID                                                  | 1 | 1 | 4 |
| (A) 24                                                                                                        |   |   |   |
| (B) 12                                                                                                        |   |   |   |
| (C) 32                                                                                                        |   |   |   |
| (D) 8                                                                                                         |   |   |   |
| 14. How many VLANs are supported by IEEE 802.1Q tag for VLAN?                                                 | 1 | 3 | 4 |
| (A) 1024                                                                                                      |   |   |   |
| (B) 2048                                                                                                      |   |   |   |
| (C) 4096                                                                                                      |   |   |   |
| (D) 8000                                                                                                      |   |   |   |
| 15. The TCP port for Stateless Tunneling Transport is _____                                                   | 1 | 1 | 4 |
| (A) 4796                                                                                                      |   |   |   |
| (B) 7471                                                                                                      |   |   |   |
| (C) 8080                                                                                                      |   |   |   |
| (D) 404                                                                                                       |   |   |   |
| 16. _____ has become the current dominant method of making API calls across SDN networks.                     | 1 | 2 | 4 |
| (A) CLI                                                                                                       |   |   |   |
| (B) SNMP                                                                                                      |   |   |   |
| (C) P2P                                                                                                       |   |   |   |
| (D) REST (Representational State Transfer)                                                                    |   |   |   |
| 17. _____ is to take the source code from an open source software program and develop an entirely new program | 1 | 2 | 5 |
| (A) FSF                                                                                                       |   |   |   |
| (B) Forking                                                                                                   |   |   |   |
| (C) Plaguing                                                                                                  |   |   |   |
| (D) Creating                                                                                                  |   |   |   |
| 18. The Linux operating system is distributed under the _____ license.                                        | 1 | 1 | 5 |
| (A) GNU                                                                                                       |   |   |   |
| (B) Apache                                                                                                    |   |   |   |
| (C) GPL                                                                                                       |   |   |   |
| (D) BSD                                                                                                       |   |   |   |
| 19. _____ is an open flow switch implementation                                                               | 1 | 1 | 5 |
| (A) Beacon                                                                                                    |   |   |   |
| (B) Pantou                                                                                                    |   |   |   |
| (C) Indigo                                                                                                    |   |   |   |
| (D) NOX                                                                                                       |   |   |   |
| 20. Which among the following SDN applications is a management application for Floodlight?                    | 1 | 2 | 5 |
| (A) Avior                                                                                                     |   |   |   |
| (B) Quagga                                                                                                    |   |   |   |
| (C) Frenetic                                                                                                  |   |   |   |
| (D) OSCARS                                                                                                    |   |   |   |

**PART - B (5 × 4 = 20 Marks)**

Answer any 5 Questions

Marks BL CO

|                                                                                            |   |   |   |
|--------------------------------------------------------------------------------------------|---|---|---|
| 21. Why SDN is preferred over traditional networks?                                        | 4 | 2 | 1 |
| 22. Differentiate between underlay and overlay networks?                                   | 4 | 3 | 1 |
| 23. Differentiate between Proactive and Reactive flows.                                    | 4 | 3 | 2 |
| 24. Illustrate how service engineered path is configured by the SDN controller?            | 4 | 3 | 3 |
| 25. Compare the alternatives of SDN in addressing the Multi tenancy needs of a data center | 4 | 4 | 4 |
| 26. List the benefits of network orchestration.                                            | 4 | 3 | 3 |
| 27. Explain the use of SDN technology in Roaming in Mobile Networks.                       | 4 | 4 | 5 |

**PART - C (5 × 12 = 60 Marks)**

Answer **all** Questions

**Marks BL CO**

|                                                                                                                                                                                                  |    |   |   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|---|---|
| 28. (a) (i) Explain the functionalities of control plane and data plane<br>(ii) Discuss about OpenFlow wire protocol for establishing control session in SDN.                                    | 12 | 4 | 1 |
| <b>(OR)</b>                                                                                                                                                                                      |    |   |   |
| (b) (i) Draw and explain the SDN framework.<br>(ii) How network orchestration provides connectivity in SDN?                                                                                      |    |   |   |
| 29. (a) (i) How SDN Software switch is different from SDN hardware switch?<br>(ii) With a neat block diagram of the core/user module relationships, explain the features of Trema SDN controller | 12 | 4 | 2 |
| <b>(OR)</b>                                                                                                                                                                                      |    |   |   |
| (b) (i) Draw a neat block diagram and explain Nicira Controller with Open vSwitch.<br>(ii) Differentiate between NOX and POX                                                                     |    |   |   |
| 30. (a) Explain about publish and subscribe interface model for message exchanging. Mention its features and benefits.                                                                           | 12 | 3 | 3 |
| <b>(OR)</b>                                                                                                                                                                                      |    |   |   |
| (b) (i) Define flow and flow table in SDN.<br>(ii) Draw a neat block diagram and explain the packet matching and forwarding process in SDN switch.                                               |    |   |   |
| 31. (a) Explain and Compare the three main tunneling technologies encapsulation formats that have been proposed for network virtualization: VXLAN, NVGRE, and STT.                               | 12 | 4 | 4 |
| <b>(OR)</b>                                                                                                                                                                                      |    |   |   |
| (b) How SDN is related to wide area networks?                                                                                                                                                    |    |   |   |
| 32. (a) Explain the following potential novel applications of open SDN<br>(i) Elastic Tree (ii) Security Applications,                                                                           | 12 | 3 | 5 |
| <b>(OR)</b>                                                                                                                                                                                      |    |   |   |
| (b) Discuss the Open source licensing issues in detail.                                                                                                                                          |    |   |   |
